

SEND Dataset QC Best Practices

Project Scope

Across industry, there are a wide variety of quality control (QC) checks for SEND datasets. This is currently done without commonly acknowledged scope and intensity, based on the companies own approaches. For more confidentiality of the quality of SEND dataset across different stakeholders this group targets to:

- Explore the variety of QC procedures and tools among different stakeholders
- Identify practical amount of QC checking of SEND datasets (including the QC checks for the comparison of SEND datasets and the study report)
- Identify a suite of tools and procedures (e.g. visualisation, documentation, etc) for QC
- Develop recommendations for stakeholders for efficient and effective SEND QC practices and, in the long term, for starting a foundation of commonly agreed QC procedures
