

SEND Industry Feedback Survey

Project Scope

Execute an annual survey process to objectively collect data that enables detection of impactful issues and trends (both good and bad) that can be acted upon by the PHUSE community

The survey will:

- provide SDOs with actionable information regarding improvements to their standards.
- enable CROs, software developers and data service providers, with extensive data management experience, an opportunity to provide actionable recommendations
- provide Sponsors with information on how they can better leverage their SEND investments.

Results of the survey will be presented at the PHUSE/FDA CSS.
