KPI Metrics Definitions & Terminology Map

Details of the definitions and terminology contributing to the common Data Reporting Metrics are presented in the map below. The definitions and terminology are organised into 3 primary categories relating to Study (yellow), Integrated Summary (green) and Regulatory Group (blue) activities respectively. There are also Clinical Operations objects and activities (blue diamond).

Collecting, tracking and evaluating data on an ongoing basis can provide organisations with credible, compelling information when communicating with key decision-makers and stakeholders. The PHUSE Key Performance Indicators & Metrics Project has established a set of common data reporting metrics which are more detailed than industry-wide metrics, therefore allowing a greater level of granularity in our project reporting, and business process management.

To complement the reporting metrics, there are also standardised relevant terminology and definitions documents presented in the map below. The metrics, with their definitions, is sent independently to life science industry companies in order to collect their information through an online survey.

Confidentiality of the data is of the utmost importance. PHUSE agree that all data submitted as part of the survey, is strictly confidential and will only be used to produce the KPI/Metrics report, and all analysed data received from the survey must be used in a confidential manner by the participants.
